

ACKNOWLEDGMENT

This study was financed from the Malta Council for Science and Technology and the MCST Space Research fund for project MAARESS with grant agreement SRF-2021-1S2. The University of Malta, Ambjent Malta, the Environment and Resources Authority, and PIXAM LTD all made valuable contributions to the MAARES project. The MAARES project began in October 2021 and is scheduled to conclude in May 2023. Our sincere appreciation goes out to all those who supported this research effort.

First S. Zerafa is an academic at the Malta College of Arts Science and Technology, founder and managing director of Pixam LTD, a Malta-based firm that specializes in innovative software solutions for drone and robotic use in agriculture. Steve's passion for cutting-edge technology led him to pursue a PhD at the University of Malta, where he is researching the combinational use of drones and unmanned ground vehicles to revolutionize the field.

At Pixam, Steve oversees the creation and introduction of new products while working with esteemed academic institutions and universities around Europe. His ultimate objective is to develop state-of-the-art drone systems for renewable energy sources and environmental monitoring and solidifying his position as an industry pioneer. Prior founding Pixam, Steve worked as a project director on several technical projects with international organizations and mentored tech start-ups throughout Europe.

Steve Zerafa has published multiple publications including the scientific paper titled "Evaluating Urban Solar Resource Using Drones and Real-Data Techniques" and a chapter in the bestselling book on civil aviation, "Drone Deploy 3".
